EDUCATION

University of California, San Diego

September 2024 - December 2026

Bachelor of Science in Computer Science

- Relevant Coursework: Data Structures, Algorithms, Software Engineering, Machine Learning, Recommendation Systems

San Diego Miramar College

August 2022 - May 2024

Associate of Science for Transfer in Computer Science

- Honors Student, Associated Student Government Senator, Engineering Club officer

WORK EXPERIENCE

Software Engineer Intern / Live Nation Entertainment

September 2025 - December 2025

- Applied engineering principles to design, develop, test, and debug **LLM-based pipelines** classifying genres for **60,000+** artists, achieving **99%** coverage and reducing processing time by **60%** by leveraging **parallelized LLM calls**
- Evaluated genre classification using **LLM-as-a-judge** to assess accuracy, coverage, and uncertainty, achieving a **70% accuracy improvement** over original Ticketmaster genre labels
- Created data pipelines by cleaning **100,000+ records** using **PySpark and SQL** to support ML-driven production systems

Software Engineer Intern (ML) / TransCore

June 2025 - September 2025

- Developed and deployed **Python-based AI services** and **fine-tuned Llama models**, improving dispute resolution accuracy by **30%** in production workflows
- Built and deployed **RAG pipelines** using **Python, SQL, FastAPI**, and cloud infrastructure to retrieve, rank, and generate responses from structured and unstructured data
- Created a **self-learning ML knowledge base**, auto-generating **200+ knowledge collections** to boost accuracy
- Optimized **tooling services** to automate information retrieval across tolling systems

Software Engineer Intern / Argus West Investigations

January 2025 - April 2025

- Streamlined **150+ RESTful API** endpoints, implemented **CRUD** functionality, and managed database model migrations using **Django** to create a **Case Management System (CMS)**
- Enhanced backend logic and wrote **unit tests** using **Django TestCase** to improve maintainability and reduce execution times
- Followed **Agile methodologies**, participating in sprint planning, daily stand-ups, and code reviews

Software Development Intern / Falkor

July 2024 - September 2024

- Designed **50+ reusable React Native components** for a full-stack social media application, enhancing UI consistency
- Integrated **100+ Django RESTful APIs** and containerized backend services with **Docker** and **CI/CD pipelines**, streamlining local development and deployment
- Collaborated with designers and engineers to translate user requirements into responsive, accessible UI components
- Enhanced frontend performance by adding **lazy loading, pagination, and optimized API calls**, reducing load time by **30%**

PROJECTS

Note Cast

June 2025 - Current

- Built a **React-based AI-powered application** that converts written notes into podcasts using **AWS Polly text-to-speech**, supporting scalable content generation
- Implemented secure user authentication with **Amazon Cognito** and integrated **Google OAuth** for seamless login
- Designing and implementing an **LLM-based Retrieval-Augmented Generation (RAG) chat agent**, incorporating **embeddings, vector search, and prompt orchestration**
- Leveraged **AWS Lambda** for serverless backend logic, **DynamoDB** for tracking word usage, and **S3** for audio file storage

Triton Spend - Computer Science and Engineering Society

September 2024 - May 2025

- Led frontend and backend development and built **20+** dynamic components and pages for a **React Native open-source app, Triton Spend**, an app for tracking finances
- Integrated secure user authentication and **PostgreSQL-backed RESTful APIs** using **Google Auth** and **Node.js**
- Launched the application using **AWS** and set up **CI/CD pipelines** with **GitHub Actions**, automating testing and deployment

TECHNICAL SKILLS

Languages: C++, Java, Python, HTML, CSS, JavaScript, TypeScript, SQL

Libraries and Frameworks: React, React Native, Django, Node.js, PostgreSQL, MySQL, PySpark, Pandas, NumPy

Developer Tools: Git, GitHub, Bitbucket, Jira, Docker, Postman, Swagger, AWS, Firebase
